Bothered by Arthritis? Concerned About Heart Disease?

We are conducting a research study of 3 approved medications commonly used to treat pain due to osteoarthritis (OA) or rheumatoid arthritis (RA) in people who also have or are at high risk for heart disease.

Qualified participants will receive study-related medical care, regular study check-ups, and study medication at no charge.

To qualify you must be 18 years of age or older and have

- Osteoarthritis or rheumatoid arthritis for at least 6 months
- A regular prescription for your pain for at least 6 months
- A history of heart disease (such as heart attack, stroke, or diabetes) or a combination of 3 or more of the following: high blood pressure, high cholesterol, a smoking habit, age 55 years or older, or a family history of heart disease.
